### 3) Read the following passage, then answer the questions:

Dolphins have become a **popular** attraction at zoos in recent years. They are more and more interesting than lions and tigers because they are livelier and perform tricks like circus animals. But, although they are more willing to cooperate with the trainer than other mammals in captivity, they got bored if they are asked to do the same trick twice. This is one reason for believing they are very intelligent.

Dolphins are regarded as the friendliest creatures in the sea and stories of them about helping drowning sailors have been common since the Romans. We now have more reliable evidences of their usefulness than sailors' tales. In South Africa, two dolphins have been trained to help swimmers in difficulties and drive sharks away from the beach. The more we learn about dolphins, the more we realize that they are better organized and their society is more complex than people have previously imagined. **They** look after other dolphins when they are ill, care for pregnant mothers and protect the weak as we do.

Some scientists have suggested that dolphins have a language system which is similar to bats one and man cannot hear. It is much more probable that they have an echo-location. Could any of these mammals be more **intelligent** than man? The question cannot be answered.
